THE APPRAISAL OF CONTENT IS TENTATIVE.  
(FOR KEY SEE REVERSE)

1. Production targets for boilers at VEB Bergmann-Borsig, Berlin-Wilhelmsruh, will probably be cut in the second half of 1954. It was believed that two boilers, capacity 125 tons per hour each, scheduled to be delivered to VEB Schwermaschinenbau Georgi-Dimitroff (formerly Otto Gruson), in Magdeburg; 1 boiler, capacity 50 tons per hour, scheduled to be delivered to Hennigsdorf; 1 boiler, capacity 40 tons of steam per hour, scheduled to be delivered to Rodleben; and 2 boilers, capacity 25 tons per hour each, scheduled to be delivered to Zittau would be eliminated from the production program. Instead, 3 new boilers, capacity 64 tons per hour each, will probably be manufactured for a plant at Regis near Borna.
2. On 18 May 1954, an additional director, Dolyansky,<sup>1</sup> was assigned to VEB Bergmann-Borsig. Dolyansky was believed to be a Russian citizen who previously had been manager of one of the SAG plants. After the new director arrived, the supply of materials for the Bergmann-Borsig plant increased. However, most of the raw materials delivered were unusable.
